TOM LEHMANN

RACE FOR THE Galaxy

Explore, Settle, Develop, Trade, Consume, or Produce? Which do you need the most?
Which of Earth's former colonies will be most successful at settling the galaxy, now that
JumpDrive exists? Who will discover the secrets of the mysteriously vanished Alien Overlords?
Your goal: to build the most prosperous and powerful space empire!

OVERVIEW

In *Race for the Galaxy*, players build galactic civilizations by game cards that represent worlds or technical and social developments.

Each round consists of one or more of five possible *phases*. In each round, each player secretly and simultaneously chooses one of seven different *action cards* and then reveals it. Only the selected phases occur. For these phases, every player performs the phase's *action*, while the selecting player(s) also get a *bonus* for that phase.

For example, if at least one player chooses the *Develop* action, then the *Develop* phase will occur; otherwise it is skipped. In it, each player may simultaneously select a development from their hand of cards to build. After revealing these cards, each player adds their development to their *tableau* of cards on the table and then discards cards from their hand equal to its cost. Each player who chose *Develop* discards one card fewer as their bonus.

Explore allows a player to draw cards and select which of them to add to their hand. *Settle* allows a player to place a world in their tableau. Some worlds produce *goods*, represented by face down cards, when *Produce* is selected. These goods can be discarded for victory points or sold to add cards to the player's hand by selecting *Consume*. With cards, players can settle new worlds and build more developments, gaining both victory points and *card powers* that provide advantages in certain phases.

The player who best manages their cards, phase and bonus selections, and card powers to build the greatest space empire, wins.

The winner is the player with the most victory points.

Players simultaneously choose which game phases will occur. Game phases that nobody chooses do not occur. Each player receives a bonus in the phase that they chose.

Cards are used in three ways: as developments or worlds to be placed; as money; or as goods to be consumed or sold.

Players explore for useful cards, build developments, settle worlds, and produce goods. Goods can be consumed for victory points or sold for cards.

The player with the most victory points wins!

CONTENTS

Some cards in the two decks have been presorted for your very first game (see Setup). Unpack the card decks carefully.

- 5 start world cards (numbered "0" to "4" in red or blue squares in their upper left and lower right corners)
- 109 game cards (like start worlds, these have the game title on back)
  - 59 worlds (with ○ symbols)
  - 50 developments (with ◇ symbols)
- 4 sets of 7 player action cards (used to select phases and bonuses each round; these have no title on their brightly colored backs)
- 8 duplicate action cards for experienced 2-player games (marked ⊡)
- 6 optional start worlds for experienced players (see page 8)
- 4 summary sheets
- 1 sample rounds folder
- 28 Victory Point (VP) chips: 18 @ 1, 6 @ 5, and 4 @ 10

Carefully remove the VP chips from their frame before your first game.

a development

a world

sample game cards
(front)

1

Place 12 victory point (VP) chips per player in **1** and **5 VP chips** nearby. Set aside the **10 VP chips** (and any left over chips) for use only during the final round of play.

Each player takes a set of seven *different* **action cards**.

Find and shuffle the five **start worlds**. Deal one world face up to each player. These form each player's initial card *tableau*.
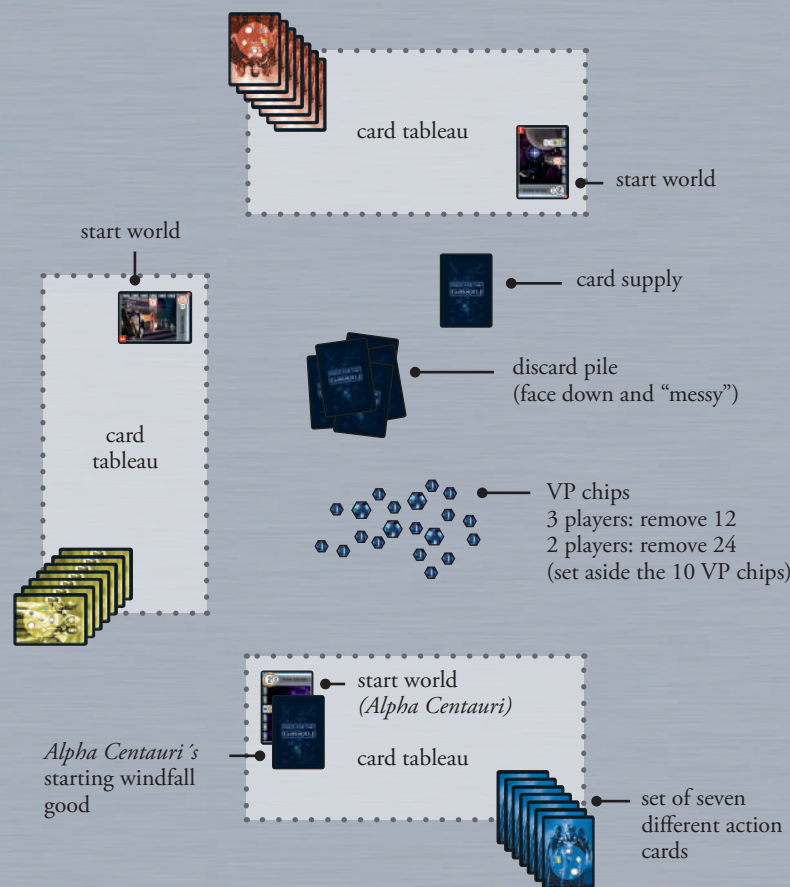

> **Your first game:** instead, for two players, use start worlds 1 and 2; for three, use start worlds 1–3; and, for four, use start worlds 1–4.

Shuffle the unused start worlds together with the **game cards**. Deal six face down cards to each player. Each player then examines these cards and discards two cards face down to the discard pile. The remaining game cards form the initial *card supply*.

> **Your first game:** instead, each player uses the four *numbered* game cards matching their start world's number as their initial (preset) hand. After finding these preset hand cards, shuffle all the remaining game cards, including any left over start worlds and preset hand cards, together.

> The start worlds, preset hands, and action card sets for your very first game have already been presorted.

If *Alpha Centauri* is in play, place a card from the card supply face down on top of it (as its starting windfall good).

2 players: remove 24
(set aside the 10 VP chips)

start world (Alpha Centauri)

card tableau

Alpha Centauri's starting windfall good

set of seven different action cards

Each player's card *tableau* is in front of them. It is one or more rows of face up cards: developments and worlds. Some worlds may have *goods*, represented by face down cards, on them. Initially, it contains only the player's start world (and its windfall good, if it has one).

start worlds   preset cards
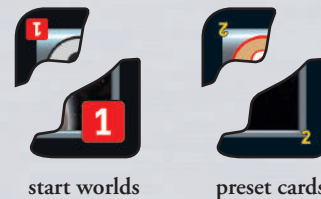

Start worlds have numbered red and blue boxes in their upper left and lower right corners (these colors are used in a future expansion). Preset hand cards have numbers without boxes.

Set out 12 VPs per player in 1 and 5 VP chips.

Set aside the 10 VP chips for later use.

Give each player a set of seven action cards and a random start world.

Shuffle the unused start worlds and game cards. Each player gets 6 cards and discards 2 of them.

The remaining cards form the card supply.

Cards in the card supply and the discard pile are both face down. To tell them apart, keep the card supply neat and the discard pile a bit "messy".

Use 12 VPs per player.

A player's developments and worlds are placed in a card *tableau*.

PLAYING THE GAME

A game is played over several rounds (typically 7 to 11). At the start of a round, players simultaneously and secretly choose one action card, placing it face down in front of themselves. Once all players have done so, they turn these action cards face up. Then, the players perform the selected phases in order (I: Explore; II: Develop; III: Settle; IV: Consume; V: Produce), omitting every phase not chosen by at least one player.

Each phase has an *action*, which is performed by *all* players. In addition, the players who chose that phase get a *bonus*.

> **Important:** if more than one player selects the same phase, its action is still only performed *once* (with all the players who selected that phase receiving a bonus).

> The bonus for an action either modifies it (such as reducing its cost or doubling the VPs gained) or is in addition to it (such as a card draw afterwards or the opportunity to sell a good).

> Players may find it useful to turn over the action card(s) for each phase as it is completed before performing the next one.

> New players may find it useful to place the selected action cards in the center in numerical order. As players become more familiar with the phase order, this won't be necessary.

After all phases selected that round have been performed, each player must discard down to ten (game) cards in their hand and then reclaims the action card that they played that round.

Successive rounds are performed in the same manner until an end-of-game condition is met (see *Game End* below).

Game cards have three uses: as a *development* or *world* to be placed in a player's tableau; as *one wealth* to discard from one's hand face down when paying to place a development or world; or as a *good* placed face down on a world either upon it being settled or during production.

I: EXPLORE

Action: each player draws two cards and then *simultaneously* selects which one of them to add to their hand, discarding the other card face down in the center discard area.

> All cards drawn are dealt out before any cards are discarded.

There are *two* possible *Explore* bonuses, depending on which *Explore* action card was chosen by a player.

A player who chose *Explore: +5* draws five more cards to select from before making their choice. Such a player explores by drawing 7 cards and choosing 1 of them to add to their hand.

A player who chose *Explore: +1,+1* draws one more card to select from *and* keeps another card. Such a player explores by drawing 3 cards and choosing 2 of them to add to their hand.

> Thus, depending on the bonus chosen with the Explore action, a player can either have more cards to select from or gain an extra card to keep.

> The *powers* of various cards can alter these rules if a player has them in their tableau, possibly providing extra card draws or allowing a player to keep additional cards.

Example: with this Explore power, a player (with no bonus) would draw four cards and keep two of them.

II: DEVELOP

Action: each player places a development card from their hand face down, or no card if a player doesn't intend to place a development. Once all players have done so, they *simultaneously* turn them face up and then pay for them.

> If desired, players can put their intended developments (if any) under their action card, revealing them when everyone is ready.

Each development has a ◇ symbol containing its *cost*, ranging from 1–6. To pay for a development, a player discards cards equal to this number face down from their hand.

Players who chose *Develop*, as the bonus, discard one card fewer than the development's cost. If, due to powers, a player is already discarding no cards, no bonus is received.

A player may not build a given development if another copy of it is currently in their tableau.

Next to a development's diamond is its victory point (VP) value. It adds to the player's final victory point total at the end of the game.

6-cost developments have ⟨?⟩ listed as their victory point values. These are worth a variable number of victory points at the end of the game, as indicated on these cards.

> The *powers* of various cards can alter these rules if a player has them in their tableau *before* the development phase begins.

Action: place and pay for a development.

To indicate no development, some players "knock" on the table, others put a world instead face down and flip it over, others put a card down but pick it up saying "no" when all are ready. Agree on a convention.

Bonus: discard one fewer card when paying for a development.

A player may have only one of any given development in their tableau.

Developments are worth victory points.
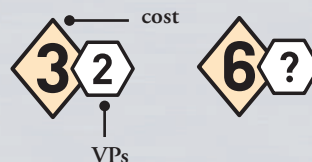

CARD POWERS

Every development, and most worlds, list one or more *powers*. *Standard powers* are depicted by icons with no text description (see the reference sheet). *Special powers* have icons, highlighted phases, and text descriptions at the bottom of the card which begin with the corresponding phase number.

All powers modify rules and are cumulative. A power modifies only the rules listed in its description; all other rules still apply.

"Draw" — in all phases except *Explore* — means draw a card and add it to your hand. In *Explore*, it means draw a card and add it to the cards you then select from, as in the *Explore* rules.

> If, due to powers, a cost is reduced below 0, it becomes 0. A player does not receive cards as a "refund" if this occurs.

A power does not take effect in the *phase* in which its card is placed; it can begin to take effect as soon as the *next* phase.

> Thus, the *Public Works* power to draw one card after its owner builds a development does not apply to *Public Works* itself.

Unless a power's description uses the word "may", a power *must* be used, if possible, in the phase to which it applies (though a player may freely choose the order in which to invoke powers, as discussed further under *Consume*).

> An optional power (such as a *Colony Ship*) *must* be used if it is needed to place a development or world which a player has selected and then revealed.

Powers are resolved sequentially (even though their effects can be cumulative). A player cannot "interrupt" one power with another.

Developments, and most worlds, grant powers.

Power icons appear on the left side of cards, arranged in I to V phase order, allowing players to easily scan their tableaus for them during a phase.

The chromosome icon ▨ , UPLIFT , IMPERIUM , and TERRAFORMING are for use in future expansion sets.

Powers first take effect in the phase *after* their card is placed.

Powers must be applied if possible, unless the card text indicates otherwise.

III: SETTLE

Action: each player places a world card from their hand face down, or no card if a player doesn't intend to place a world. Once all players have done so, they *simultaneously* turn them face up and then pay for (or conquer) them.

Many worlds contain a black number, ranging from 0–6, in a black circle; this is the world's *cost*. To pay for such worlds, the player discards cards face down from their hand equal to this number.

Players who chose *Settle*, as the bonus, draw one card after placing and paying for (or conquering) a world.

Beside a world's circle is its victory point value. This adds to the player's final victory point total at the end of the game.

The *powers* of various cards can alter the settle rules if a player has them in their tableau *before* the settle phase begins.

Windfalls: some worlds have a colored "halo" around their circle, showing that they are *windfall worlds* and that a good is to be put on them when they are first settled. To do so, as part of placing the world in a player's tableau, they take a card face down — without looking at it — from the card supply and put it on top of the world's lower right portion (to avoid hiding the world's VPs and powers). This card represents a *good* of the *kind* indicated by the color of the world's halo.

There are four *kinds* of goods in the game:
 • *Alien technology* ▮, artifacts left by the vanished Alien Overlords.
 • *Genes* ▮, genetic material used in biological research.
 • *Rare elements* ▮, transuranic elements powering JumpDrive.
 • *Novelty goods* ▮, such as artwork and entertainment.

Military Conquest: some worlds have red circles and, within them, a red outlined number, ranging from 1–7; this is the world's *defense*. These worlds *cannot* be placed by payment, but instead must be *conquered*. To conquer a world, a player's total *Military* must equal or exceed the world's defense. Then, the player simply places it — and its *windfall* good, if it has a halo — without paying for it (and then draws a bonus card if that player chose *Settle*).

Military is granted by powers of various start worlds, developments, or worlds, and lasts until the end of the settle phase.

Some developments and worlds, such as *Empath World*, *subtract* from a player's total Military.

New Military Tactics may be discarded from a player's tableau for +3 Military until the end of that settle phase.

A *Contact Specialist* enables a player to place and pay for a military world (except an *Alien* military world), at a cost equal to one less than the world's defense.

Important: this cost is *not* reduced by a player's Military (Military and payments *never* combine).

Cost discounts from *Replicant Robots*, *Mining Robots*, etc. *do* combine with a *Contact Specialist* to reduce the cost of placing a military world. Similarly, a *Colony Ship* allows a *Contact Specialist* to place a (non-*Alien*) military world at no cost.

Thus, there are two *completely separate* ways to place military worlds.

Action: place and pay for a world, receiving any *windfall* as indicated.

cost
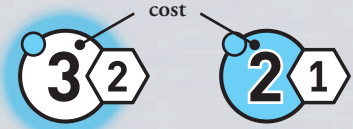

windfall world   production world

Blue, brown, and green worlds have a "moon" in a quadrant as an aid for color-blind players. (A reddish circle in the lower right is a Rebel *world, see* Galactic Imperium, *back page.)*

Bonus: draw a card *after* placing a world.

VPs

Worlds are worth victory points.

A *windfall* is received *once*, when a world is first placed.

Windfall goods are placed on top of worlds with colored halos around their costs.

Military worlds (with red circles) must be *conquered* to be placed.

defense

To conquer a military world, the player's Military must equal or exceed its *defense*. The player then places the world for no cost.

sample military powers

A *Contact Specialist* allows a player to place a military world by paying for it, *instead* of conquering it.

IV: CONSUME

Action: all players *must* use their consume powers, if they have any, to discard goods for victory point *chips* and/or card draws.

Some powers consume several goods. Others consume goods of a specific *kind*. Some, such as *Deficit Spending*, consume *cards*, not goods, discarded from a player's hand. A few powers, such as *New Economy*, don't involve discarding anything; they simply take effect during a *Consume* phase.

Goods are discarded face down (without examining them). Each good being discarded applies to only one consume power. A good may or may not be on the world consuming it. If a consume power could consume several possible goods, the player chooses which good(s) to consume.

Consumption is mandatory. However, consume powers can be invoked in *any* desired order, even if this results in some unconsumed goods left over that could have been consumed with a different order (due to their *kinds* or number not matching the player's remaining unused consume powers).

Each consume power can be used only once in a consume phase. Some powers allow multiple goods, "up to" some number, to be discarded, with each good producing an effect. Such powers must be fully used, if possible, when invoked.

Thus, a player with a tableau containing three novelty goods, *New Vinland*, and *Free Trade Association*, cannot consume two goods using *FTA*'s power (to consume up to 3 novelty goods for 1 VP and a card apiece) and then, based on the cards received, decide to consume the third novelty good using *New Vinland*'s power (to consume a good for two cards). The third novelty good must now be consumed by *FTA*.

(These powers could have been invoked in the reverse order, but this choice must be made before invoking *FTA*'s power — once a power is invoked, its resolution cannot be interrupted by another power.)

There are two possible *Consume* bonuses, depending on which *Consume* action card was chosen by a player.

$: Trade: players who chose *Consume: Trade* must sell one good (before applying their consume powers), by discarding it and drawing a number of cards that depends on the *kind* of good sold: *Alien technology*: 5 cards; *Genes*: 4 cards; *Rare elements*: 3 cards; or *Novelty*: 2 cards. Unlike consuming goods, no Trade power is needed to sell a good.

Only players who chose *Consume: Trade* can sell a good.

Players choosing *Consume: Trade* also apply all relevant *Trade* powers (listed next to **$**) to this sale (typically, to draw extra cards).

Players who chose *Consume: 2x VPs* double the number of victory point chips — but not any other effects — that their consume powers provide.

Exception: VPs for discarding cards from your hand (from powers such as *Deficit Spending* or *Merchant World*) are not doubled by this bonus.

5 VPs

Action: use consume powers if possible, typically to discard goods for victory point *chips*.

1   1

1 1

sample consume powers

3   x2 1 ⊘x2

Rare elements consumption (2 goods for 3 VPs)

Deficit Spending

Consume powers must be used fully, if possible, but may be used in any order.

x3 1 1   2

Free Trade Association

New Vinland

Bonus (based on the action card chosen): sell 1 good first *or* receive double VP chips.

Important: *Trade is* not *a separate phase; it occurs before a Consume phase for only those who chose it.*

$ +1 $ +2

sample trade powers

V: PRODUCE

Action: place a *good* on each *production world* (worlds with colored, solid circles) *without a good*, by taking a card face down — without looking at it — from the card supply and putting it on top of the world's lower right portion (to avoid hiding the world's VPs and powers). This good is of the *kind* indicated by the *color* of the world's solid circle (and the color of the corresponding *Produce* power).

No world can have more than one good. Place a good on the lower right portion of a world to avoid hiding the world's VPs or powers. Some worlds, such as *Gem World*, provide a card draw as part of producing a good. If a good is already present, then *no* cards are drawn.

Players who chose *Produce*, as the bonus, produce a good (if possible) on one of their windfall worlds that does not already have a good.

Some cards, such as *Genetics Lab*, can also produce goods on windfall worlds (without goods).

Others, such as *Pan-Galactic League*, provide a card draw for each world of a specific *kind* in a player's tableau (such as *Genes* worlds, with either a green halo or a green solid circle).

Action: place a *good* on each world without a good that produces one.

Place produced goods on production worlds (with colored, solid circles).

Bonus: produce a *windfall*.

Icons for produce powers that provide cards or windfalls are listed twice, once in the icon bar and once on the top, right corner of each card, as an aid when dealing out production.

ROUND END, CARDS, AND CHIPS

After all chosen phases are done, players must discard down to 10 (game) cards before starting the next round.

All discards are *face down*. Keep the discard pile a bit "messy" so that it is not confused with the card supply.

When the card supply is exhausted, immediately reshuffle the discards to form a new card supply.

All players' VP chips and the *number* of game cards they have in their hands are open for examination. Make change among VP chips as needed.

Discard down to 10 cards at the *end* of each round.

Discards are *face down* and "messy".

GAME END

The game ends at the *end* of the round (including discarding) in which:

- a player has 12 or more face up cards in their card tableau, *or*

  (A player can end with more than 12 cards in their card tableau by placing both a development and a world in the final round.)

- the last victory point chip is given out.

If victory point chips run out, add the 10 VP chips and make change so that all victory points earned in the final consume phase can be taken.

Total each player's development and world VPs, VP chips, and any end of game VPs for 6-cost ⟨?⟩ developments (see page 12).

The player with the highest total is the winner!

If two or more players tie, the player among them with the highest total number of cards in hand (after discarding) and goods on worlds wins.

If there is still a tie, then all the tied players win.

The game ends after:
- a player *ends* a round with 12 or more cards in tableau, or
- the VPs chips run out.

Finish the final round. Use the 10 VP chips if necessary.

Each player totals:
- tableau card VPs
- VP chips
- VPs for ⟨?⟩ developments

The player with the most VPs wins!

After a game, separate the start worlds by fanning the deck, looking for boxed numbers in the lower right-hand corners.

TIMING

Mostly, play can and should be performed simultaneously.

However, there are a few cases where player order can matter, such as:

- when there are only a few cards left in the card supply, or
- when the VP chips might run out in a *Consume* phase, or
- when players are resolving settling near the end of the game.

  Near the end of the game, if several players have *New Military Tactics* or *Colony Ships*, one player may wish to know whether another player is using (and discarding) one of these cards *or* placing a twelfth card in their tableau (thus ending the game that round), before deciding whether to use one of these cards themselves.

In this and similar cases, resolve the phase in clockwise order (after simultaneously placing any cards), starting with the player who has the lowest numbered (original) start world.

Resolve any timing issues clockwise from the player with the lowest numbered (original) start world.

2 PLAYER GAME (for experienced players)

Initially, two players should just play the standard rules. Once you're familiar with the game, play with the following changes:

- Each player uses a full set of nine action cards and chooses *two* of them at the start of each round.
- A player selecting both *Explore* bonuses draws eight cards and keeps two of them (plus the effects of any applicable powers).
- If a player chooses either two *Develop* or two *Settle* actions, then *two complete, sequential phases* of that type occur (with this player receiving a bonus in each of them). If their opponent also chose *one* of these same actions, then this opponent receives a bonus only for the *first* of these two phases. Powers placed in the first such phase *can* be used in the second one.
- A player who selects both *Consume* bonuses must sell one good before consuming other goods for double VPs.

2 player game: use all nine action cards, choosing *two* action cards at the start of each round.

Start world choice for experienced players. During setup, separate the start worlds by number into odd (red) and even (blue) groups. Shuffle and deal two face down worlds, one from each group, to each player. Shuffle the remaining start worlds with the game cards and deal six cards to each player. Each player examines all eight cards before discarding one of their two start worlds and two of their six game cards. Players then simultaneously reveal their selected start worlds and begin play.

Special thanks are also due to: Rob Watkins, who assisted me in the mid-90s on an unpublished CCG, *Duel for the Stars*, from which much of this is drawn; Richard Borg, for a key idea; Stefan Brück, who allowed Richard and me to work on a prototype *Puerto Rico* card game; and Andreas Seyfarth, without whom we wouldn't have been inspired to do so.

I: EXPLORE

Draw Extra

+1 Draw 1 or 2 more cards to select from.

+2 *These powers do not alter the number of cards that a player keeps.*

Keep Extra

+1 Keep 1 more card.

Draw and Keep Extra

+2 +1 Draw 2 more cards to select from; keep 1 more card.

II: DEVELOP

Draw

1 Draw 1 card at the start of the *Develop* phase.

Reduce Cost

-1 -2 Reduce the cost to place a development (◇) by 1 or 2 cards.

Draw After

1 Draw 1 card after placing a development (◇).

Powers cannot reduce costs below 0 nor take effect during the phase in which they are placed.

III: SETTLE

Reduce Cost

-2 -2 cost to place a non-military world (○).

Specific Reduce Cost

-1 -1 cost to place a non-military Rare elements production or windfall world (○ ○).

Reduce Cost to 0

X =0 The player may *discard* this card from their tableau to reduce the cost of placing a non-military world (○) to 0.

This cannot be used to place an Alien production or windfall world (○ ○).

It can place the Alien Rosetta Stone World.

Powers cannot reduce costs below 0 nor take effect during the phase in which they are placed.
Cost reductions can apply when using a "Pay for Military" power to settle a military world (○).

Military

+1 Contributes Military towards conquering a military world (○).

+2

+3 *The -1 is not optional. This power reduces the player's Military, making worlds harder to conquer.*

-1

Specific Military

+4 +4 Military towards conquering a *Rebel* military world (○).

Specific Reduce Cost / Military

-1 +1
-2 +2 Reduce the cost of placing a non-military world of the indicated *kind* (▪ ▪ ▪ ▪), or add to the player's Military when conquering a military world of that kind.

Temporary Military

X +3 The player may *discard* this card from their tableau to gain +3 Military until the end of this *Settle* phase.

Pay for Military

? -1 As the action, the player may place a military world (○) as a non-military world (○). The cost is the world's defense -1, with other applicable *discounts*.

This cannot be used to place an Alien production or windfall world (○ ○) or combined with other pay-for-military powers.

The card Contact Specialist also has a -1 Military power.

Draw After

1 Draw 1 card after placing a world (○ ○).

$: TRADE

Any Good

Draw 1 or 2 more cards when selling a good.

### Specific Kind of Good
Draw 1, 2, or 3 more cards when selling a good of the indicated *kind* (▪ ▪ ▪ ▪).

This World's Good

Draw 1 or 3 more cards when selling a good from the world (⬤) with *this* power (plus any other applicable *Trade* powers, possibly due to its *kind*).

IV: CONSUME

Any One Good

Discard 1 good (of any kind) to gain the specified VP chips and/or cards.

Fixed Number of Goods

Discard 2 goods (of any kind, possibly the same) to gain 3 VP chips.

Discard exactly 3 goods, each of a *different kind* (▪ ▪ ▪ ▪), to gain 3 VP chips.

Specific Kind of Good(s)

Discard the indicated number of good(s) of the specified *kind* (▪ ▪ ▪ ▪) to gain VP chips and/or cards.

Discarding "up to"

Discard goods up to the indicated number to gain the specified VP chips and/or cards for *each* good discarded.

Once invoked, these powers *must* be used to the fullest extent possible.

Example: with two remaining goods (of the appropriate kind), the player must discard both of them after invoking one of these powers.

All Goods

Discard *all* goods (possibly after using other consume powers) to gain VP chips equal to one less than the number of goods discarded.

Example: if the player has 3 goods when this power is invoked, they discard all of them for 2 VPs.

Draw

Draw 1 card.

For Cards at *Trade* Prices

Black Market Trading World

Discard 1 good to gain cards equal to its *Trade* price (▪ Novelty: 2; ▪ Rare elements: 3; ▪ Genes: 4; ▪ Alien technology: 5). *Trade* Powers do *not* affect this power.

Trade League

Discard 1 good to gain cards equal to its *Trade* price (▪ Novelty: 2; ▪ Rare elements: 3; ▪ Genes: 4; ▪ Alien technology: 5), *plus* all applicable *Trade* powers (including its own *Trade* power).

Draw if Lucky

Name a number from 1–7. Turn the top card from the card supply face up. If its cost or defense matches the number, keep it. Otherwise, discard it.

The Gambling World *also has a standard consume power in addition to this one.*

	0	1	2	3	4	5	6	7
◇	0	12	12	4	8	2	12	0
○	2	6	17	9	4	5	2	0
○	0	6	9	3	2	2	2	1

# of cards at each cost/defense
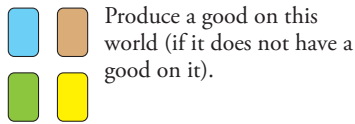

Discard Cards, *not* Goods

The player may discard up to 2 cards from their hand to gain 1 VP apiece.

*These VPs are* not *doubled by the* Consume: 2x *bonus.*
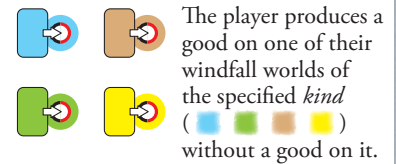

*This power is optional, so it need not be used fully.*

V: PRODUCE

Produce Good

Produce a good on this world (if it does not have a good on it).

Produce Windfall Good

The player produces a good on one of their windfall worlds (⊙) without a good on it.

Produce Specific Windfall

The player produces a good on one of their windfall worlds of the specified *kind* (▪ ▪ ▪ ▪) without a good on it.

Draw

Draw 1 or 2 cards.

Produce Good and Draw

Produce a good on this world (if it does not have a good on it) and *then* draw 1 or 2 cards. Do *not* draw any cards if no good was produced.

The production reminders for these powers show only their draw card icons.
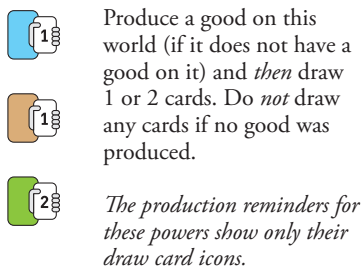

Draw on Produced Windfall

Draw 1 card after producing a good on *this* world (⬤).

The production reminder for this power shows a draw card on this world icon.

Draw for Kind

Draw 1 card for each good of the specified *kind* (▪ ▪ ▪ ▪) that the player produced during this *Produce* phase.

Draw for Most of a Kind

At the *end* of *Produce*, draw 2 cards if the player produced *more* Rare elements goods (▪) during this phase than any other player.
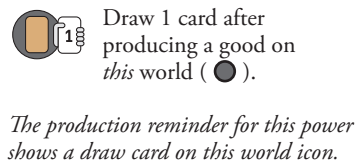

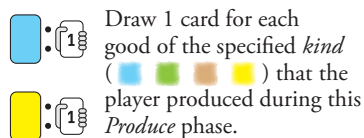

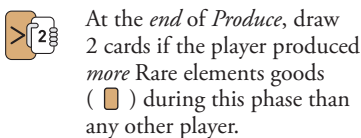

Draw for Different Kinds

Draw 1 card for each *different kind* of good (▪ ▪ ▪ ▪) that the player produced this *Produce* phase.

Draw for Worlds

Draw 1 card for each *Genes* production or windfall world (⊙ ⊙) in the player's tableau.
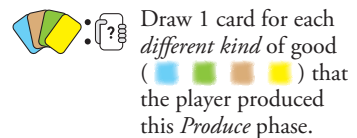

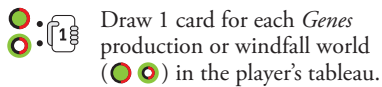

Discard to Produce Windfall

May discard 1 card from hand to produce a good on a windfall world ⊙.

34 cards consume one or more goods:
- 17 ◯ (4 start) and 2 ◯
- 15 ◇
2 ◇ and 1 ◯ consume cards for VPs.

6-COST DEVELOPMENTS **?** POWERS

For these developments, score end of the game VPs for every card in its owner's tableau that satisfies one of the conditions listed on that development (and for every 3 VPs in chips its owner has in the case of *Galactic Renaissance*). For each 6-cost development, a given card can score in only *one* of its categories. Conditions listed in ALL CAPS are titles of specific cards. For each listed card present in the owner's tableau, award the indicated VPs.

ALIEN TECH INSTITUTE

- 3 / Alien technology production world
- 2 / Alien technology windfall world
- 2 / other ALIEN card (including this one)

FREE TRADE ASSOCIATION

- 2 / Novelty production world
